

# E-WASTE IMPACT REPORT

E-WASTE REVOLUTION  
www.EWasteRevolution.com

If you have tangled cables or broken electronics packed in your closet or junk drawer you're not alone! Our technology tends to find its way into limbo land, with us not knowing what to do with them. Electronics are the fastest-growing waste stream globally with **20 to 50 million metric tons of e-waste being disposed of worldwide yearly. Only 12.5% of that e-waste is currently being recycled.** When unwanted or broken electronics enter the waste stream into landfills, toxic substances like lead, cadmium, mercury, and other harmful components can create fumes we breathe in, leach into the soil, and seep into our groundwater (that we drink). Electronics also contain valuable non-renewable resources including gold, silver, copper, platinum, aluminum, and cobalt. This means that when we dispose of them without recycling, we throw away billions of dollars worth of precious materials. To help with this problem we are helping you reduce your e-waste by donating what can still be reused, recycling what is no longer working, and choosing a sustainable electronic practice in the future!

**Tally the number of items you will be recycling on each line. If you would like to estimate its weight please note it below. Please scan or take a picture of your report and email it to: [info@ewasterevolution.com](mailto:info@ewasterevolution.com)**

**THANK YOU!**

SMALL APPLIANCES	Estimated Weight	# of ITEMS	Donated or Recycled?
Phones			
Tablets			
Laptops			
Laptops & Computers			
Cables & Power Cords			
TV & Monitors			
GPS's			
MP3/Audio Players			
Mice			
Keyboards			
Headphones/Ear Buds			
Holiday Lights			
Flashlights			
VCR/DVD players			

This worksheet is brought to you by:
